

# Ingenious product ends call-back headaches.

Waterstop Streamline was developed by a team of Building Supervisors, Water-Proofers, Tilers, Shower Screen Fitters and Building Maintenance Contractors to address the constant problem of call-backs due to leaking shower screens.

After extensive testing, it was found that the cause of most leaks was due to the design of the shower and not to an error by the contractor.

Gleda Pty Ltd Managing Director Brett Krey explains; "In most showers, whether a hobbled, hob-less or recessed design, the screen is sealed directly to the tiles and not to the water-proofing membrane. This design allows water to wick through the grout lines where it travels through the glue cavity underneath the tiles that the screen is "sealed" to, and escapes the shower enclosure."

"Waterstop Streamline provides a positive seal between the screen and the water-proofing membrane, trapping the water within the enclosure and eliminating the call-backs. Its unique, one piece design creates a template for the following trades and makes it very difficult for mistakes to occur. When compared to a tiled hob, Streamline is faster to install, looks better, wastes less space and works out cost-neutral!"

Move out of the dark ages and switch to what is rapidly becoming the new industry-standard method of shower construction.

## Take control of your shower construction

**No matter how good your contractors are, most shower designs cause problems.**

Does your current method positively connect the screen to the membrane or just to the tiles? Fact - grout lines and glue cavities transmit water.

Does your current design waste valuable floor space with ugly hobs?

Are you paying your tiler to cut 30 or more tiles, whether this is itemised on the invoice or not?

Waterstop Streamline is the only shower construction method which ticks all the boxes:

- Positive connection between screen and membrane
- Maximises floor area
- Provides a template for following trades
- Ensures correct fall to waste
- Complies with and exceeds AS3740
- Modern, cost effective, one piece design
- 20 different shapes and sizes
- Minimum change for maximum benefits

Many of our customers report that changing to Waterstop Streamline was one of the easiest they have ever made and their only regret was not having made the switch earlier.

*With so many new products on offer in our industry it is difficult to find time to investigate them all. We are very glad we made time for this one.*
